Summary

Computer Science (Data Science) undergraduate at VIT with production experience across backend systems and applied ML. Cut API latency 7× in a production internship at Beryl Systems, shipping REST APIs with JWT authentication and RBAC for real users. Comfortable owning a project end-to-end — from model training and system design to deployment.

Education

Bachelor of Technology – Computer Science and Engineering (Data Science) | CGPA: 8.47 | 2023–2027

Vellore Institute of Technology, Vellore, Tamil Nadu

Relevant Coursework: Machine Learning, Deep Learning, Data Structures & Algorithms, Database Management Systems, Probability & Statistics, Natural Language Processing

Skills

Programming Languages: Java, Python, SQL, JavaScript, GO, R

Data Science: Machine Learning, Deep Learning, NLP, PyTorch, HuggingFace Transformers, MLflow, Prefect, RoBERTa, RAG, Vector DB

Backend: FastAPI, Golang, REST APIs, JWT, RBAC, PostgreSQL, MongoDB, Netty, TCP/IP, WebSockets

Frontend: React.js, Tailwind CSS

Data: NumPy, Pandas, Matplotlib, Seaborn, Power BI, Tableau

Mathematics & Algorithms: Linear Algebra, Statistics, Probability, Multivariable Calculus, Differential equations

Other skills: Git, GitHub, Linux CLI, Bash scripting, Shell utility, System Design

Experience

Beryl Systems Pvt. Ltd. | Full Stack Intern — Web | May 2025 – June 2025 | Faridabad, Haryana

Golang · React.js · PostgreSQL · JWT · REST APIs

- Built and deployed **5 production REST APIs** in Golang with JWT authentication and role-based access control (RBAC), enabling core business workflows for ~500 daily active users
- Rewrote slow PostgreSQL queries and restructured indexes, cutting **p95 API latency from 850 ms → 110 ms** (~7× improvement) on data-heavy endpoints
- Patched **4 security vulnerabilities** — misconfigured CORS and broken auth flows — aligning the codebase with OWASP security standards
- Shipped tested frontend and backend features across **3 sprint cycles** in an agile environment with zero critical regressions

Notable Projects

JCache – Distributed In-Memory Cache Server I • Java • Netty • Docker • JMH • Consistent Hashing • TCP/IP • Multithreading

- Designed and implemented a distributed in-memory cache with **LRU/LFU/ARC eviction policies**, TTL expiration, and consistent hashing for horizontal scalability across cache nodes.
- Benchmarked performance using JMH, achieving **15M+ ops/sec throughput** and **0.21 μs p99 latency** under Zipfian workloads; implemented segmented and lock-free concurrency strategies to improve multi-threaded scalability.
- Built a Netty TCP server/client layer with a real-time WebSocket metrics dashboard and Dockerized the platform for one-command deployment via `docker pull himanshmunjajl/jcache:latest`.

GridSense - Smart Grid Demand Forecasting & Anomaly Detection I • Python • PyTorch • FastAPI • React • LSTM • Time-Series Forecasting

- Engineered a multi-zone smart-grid forecasting system using a 2-layer LSTM with Monte Carlo Dropout, leveraging 10 engineered features including temporal encodings, lag variables, and rolling statistics to forecast 24-hour electricity demand.
- Achieved **21.9–36.9 kWh MAE** and **32.0–53.8 kWh RMSE** across 4 independent grid zones through feature-engineered sequence modeling and uncertainty-aware forecasting.
- Built an unsupervised anomaly detection pipeline using an LSTM Autoencoder trained exclusively on normal consumption windows with adaptive reconstruction-error threshold calibration.

LinkPlus — Intelligent URL Shortener & Analytics Platform I • Go • Gin • PostgreSQL • Redis • JCache • React • Tailwind CSS

- Built a full-stack URL shortening system with JWT authentication, Redis cache-aside lookups, and async click tracking via goroutines — recording device type, geo-location, and IP hash per redirect without adding response latency.
- Engineered a user-scoped analytics dashboard with daily trend charts, device/country breakdowns, and QR code scan tracking via a dedicated `qr_scans` table with live subquery-computed scan counts.
- Developed an integrated QR code generator using go-qrcode with 6-hour expiry TTLs, base64 inline delivery, and real-time frontend polling with automatic cache invalidation for live scan-count updates.

Achievements

DSA & Competitive Coding

- Solved 170+ algorithmic coding problems on LeetCode with a global ranking under 900k, demonstrating strong proficiency in DSA and competitive problem solving.
- Earned the **50 Days Badge** on LeetCode for consistent coding practice.

Creative Head, Matrix – The Multimedia Club, VIT

- Led end-to-end logistics for 6+ club events, mentoring junior members and boosting participant feedback scores by 30%
- Championed end-to-end event planning for six complex operations, resolving over ten logistical challenges and ensuring seamless execution within strict time constraints.
